Codebook for the 1994 Old & New Household Questionnaires

Carolina Population Center, University of North Carolina at Chapel Hill

Using this Codebook

This codebook is a product of two questionnaires. One questionnaire was administered to Old Households, while the other questionnaire was administered to New Households. Most parts of the two questionnaires were exactly the same; however, there was an additional form and some questions asked only of Old Households. These are noted in the codebook. Below are some important things to know when working with this codebook:

Data File Pointers

There is a data file "pointer" at the top of every page. All variables described on the page are located in the data file named.

Last Modified: 05/21/03

Data File ==> HH94

Column x Column

| Question No. | Variable | | | Question | Code |
|--------------|----------|------|------|----------|------|
| | Name | Type | Size | | |

- **Question No.** points to the question number on the questionnaire. Some variables, labeled "Created at CPC," do not come from the questionnaire but have been created using the questionnaire data.
- **Variable** lists the...
 - Name** which is the SAS variable name in the data file.
 - Type** which tells whether it is a numeric variable (N) or an alphanumeric variable (A).
 - Size** which gives the maximum length of the variable.
- **Question** shows the actual question from the questionnaire if the variable is not created. If it is a created variable, then this column provides a short description of the variable. In this same column, below the question or description, is either the labels for each of the codes on this variable or a pointer to go see one of the codebook appendices.
- **Code** lists either the actual values on the variable or the format of those values.

Variable Naming Convention?

There is not a strict naming convention per se, but there are some things to point out:

- We still adhere to 8 characters or less for all variable names.
- Most variables start with a 'Q' followed by the form and question numbers.
- Flag variables created at CPC usually end with 'FL.'
- An identifier variable ends with the last 2 digits of the survey year from which it came.

Missing Values

- **Not Applicable:** Variables are assigned this code when the question is skipped according to the logic in the questionnaire. This code is always determined by the maximum length of the variable, sometimes starting with 9's and ending in an 8. For instance, a variable with a length of 3 is assigned a '998' code. A variable with a length of 1 is assigned an '8' code (with no leading 9's).
- **Missing/Don't know:** Variables are assigned this code when the respondent did not know the answer to the question or when the question was skipped during the interview. This code always has a value consisting of all 9's. The number of 9's is determined by the length of the variable. For instance, if the variable length is 3, then the variable is assigned a '999' code.

Standard Shading

As shown below, the column headers are always shaded as well as the row that contains the actual question or description that corresponds with the variable.

| Question No. | Variable | | | Question | Code |
|--------------|----------|------|------|---|--|
| | Name | Type | Size | | |
| 2 | | | | Age | |
| | Q2 | N | 2 | Code current age in years Less than one month At least 1 month, but less than 1 year (e.g., 5 months old would be coded as 85) 80 years old and over N/A Missing/Don't know | 0 8 + # of months 80 98 99 |

Restricted-Use Shading

There are variables described in the codebook which are only available in the restricted-use data files. For these variables, all of the columns – question number, variable name, question and code – and all of the codes and labels have been completely shaded:

| | | | | | |
|---|---------|---|---|--|----------------|
| 2 | LEKTI94 | A | 3 | Ban Lek Ti Code the Ban Lek Ti from 1994 survey Missing/Don't know | 1 – 297 999 |
|---|---------|---|---|--|----------------|

Some of the restricted-use variables are recoded for the public release data files, while others are not available in any form. The variable above (LEKTI94) is not available in any form in the public release data files. When a restricted-use variable is recoded for the public release data files, then a note and the public release codes will follow the variable:

| | | | | | |
|-----|--------|---|---|--|--|
| 4.5 | Q4_5P1 | N | 9 | Current address In this village In this split village Temple in this village Temple in this split village Another village in Nang Rong Another district of Buriram Another province Another country N/A Missing/Don't know | 1 + 0 + BLT + 0000 1 + 0 + BLT + Village # 1 + 0 + 996 + 0000 1 + 0 + 996 + Village # 2 + Village # + 0000 3 + District # + 0000 4 + Province # + 0000 5 + Country # + 0000 999999998 999999999 |

The Q4_5P1 variable in the public use data has the following values which are recodes of the original values:

Identifier Variables for the Community and Household Data in 1984, 1994 and 2000

Understanding the identifier variables is vital in working with the data files and merging them appropriately. Analysts will need to consistently use three different types of identifiers – village, household and individual - in working with the community and household data files. Each identifier type represents a different level of observation and detail and provides the key to the most important mechanism for matching and linking villages, households and people. Below, there is a description for each identifier type, which is then followed by the identifier variable names (both restricted- and public-use data) for each survey year:

- **Village** - A unique number was assigned, during or just prior to the data collection, to villages that existed within the boundaries of the 1984 Nang Rong District.

| | <u>1984 Survey</u> | <u>1994 Survey</u> | <u>2000 Survey</u> |
|------------|--------------------|--------------------|--------------------|
| Restricted | VILL84 | VILL94 | VILL00 |
| Public | n/a | n/a | n/a |

- **Household** - Each household received two unique identifiers. The first identifier was assigned by an interviewer within the household's respective village as the village list was being compiled. The second identifier was written on the household's questionnaire by the interviewer. This identifier includes the village number and the house number (or unique sequential number in 1994).

| | <u>1984 Survey</u> | <u>1994 Survey</u> | <u>2000 Survey</u> |
|---------------|--------------------|--------------------|--------------------|
| Restricted #1 | HOUSE84 | LEKT194 | HOUSE00 |
| Restricted #2 | HHID84 | HHID94 | HHID00 |
| Public | PHHID84 | PHHID94 | PHHID00 |

- **Individual** - The individual identifiers (CEP codes) are found on the household roster. The CEP code was assigned by the interviewer as the household roster was being updated during the interview.

| | <u>1984 Survey</u> | <u>1994 Survey</u> | <u>2000 Survey</u> |
|------------|--------------------|--------------------|--------------------|
| Restricted | CEP84 | CEP94 | CEP00 |
| Public | CEP84 | CEP94 | CEP00 |

Given the three identifier types, the following table shows what identifier variables are needed to uniquely identify a village, a household and an individual in both the restricted- and public-use data:

Identifier Variables for the Migrant Follow-Up Data in 1994 and 2000

The Migrant Follow-Up data has only two identifier types – household and individual. Please note, however, that the household survey identifiers are part of the Migrant Follow-Up data to allow linkages between the migrant and household data. The two migrant identifier types represent a different level of observation and detail that provides the key to the most important mechanism for matching and linking migrant households and people. Below, there is a description for each identifier type, which is then followed by the identifier variable names (both restricted- and public-use data) for each survey year – 1994 and 2000:

- Household** – Each migrant household had an identifier written on the questionnaire by the interviewer. This identifier includes the village number from which the migrant originated and a unique sequential number. In the 2000 data, there were two phases of the Migrant Follow-Up data collection – the urban phase and the rural phase. Since the household identifier (MID00) could be the same across the two phases, a second variable (MIGTYPE), signifying the migrant type, is needed to uniquely identify the household.

| | <u>1994 Survey</u> | <u>2000 Survey</u> |
|------------|--------------------|--------------------|
| Restricted | MID | MID00, MIGTYPE |
| Public | PMID94 | PMID00 |

- Individual** - The individual identifiers (MCEP codes) are found on the migrant's household roster. The MCEP code was assigned by the interviewer as the migrant's household roster was being updated during the interview.

| | <u>1994 Survey</u> | <u>2000 Survey</u> |
|------------|--------------------|--------------------|
| Restricted | MCEP8 | MCEP00 |
| Public | MCEP8 | MCEP00 |

Given these two migrant identifier types, the following table shows what identifier variables are needed to uniquely identify a migrant household and an individual in both the restricted- and public-use data:

Migrant Follow-Up Data

| To uniquely Identify a ... | Restricted-Use Data | | Public-Use Data | |
|----------------------------|---------------------|----------------------------|-----------------|------------------|

Identifiers from the 1984 and 2000 Household Surveys

The following identifier variables are from the 1984 and 2000 Household Surveys. These variables can be used to link an individual to the 1984 and/or 2000 Survey data files. Please note that not all individuals can be linked to the 1984 and/or 2000 data files. These individuals are coded as "N/A" on the appropriate identifier set(s).

Identifiers from the 1984 Survey

| | | | | | |
|--|---------|---|---|--|------------------|
| | VILL84 | A | 2 | 1984 Village Number N/A | 01 – 51 [] |
| | HOUSE84 | A | 3 | 1984 House Number A unique 3-digit sequence number within village. N/A | 001 – 185 [] |

The VILL84 and HOUSE84 variables are not in the public use data, but they have been replaced with one variable called PHHID84. The values for this new variable were randomly generated based on the original values from VILL84 and HOUSE84:

| | | | | | |
|------------------|---------|---|---|---|-----------------------------|
| Public Use Codes | PHHID84 | N | 4 | Randomly generated sequence number N/A | 1 – 5860 [] |
| | CEP84 | A | 3 | 1984 CEP Number Person Identifier within the 1984 household N/A | 101 – 118, 201 – 209 [] |

Identifiers from the 2000 Survey

| | | | | | |
|------------------|---------|---|---|---|----------------------------|
| | HHID00 | A | 9 | 2000 Household Identifier Household ID from Questionnaire in 2000 N/A | Village # + House # [] |
| Public Use Codes | PHHID00 | N | 4 | Randomly generated sequence number N/A | 1 – 9415 [] |
| | CEP00 | A | 2 | 2000 CEP Number Person Identifier within the 2000 household N/A | 01 – 20 [] |

The HHID00 variable is not in the public use data, but it has been replaced with a variable called PHHID00. The values for this new variable were randomly generated based on the original values from HHID00:

| Question No. | Variable | | | Question | Code |
|--------------|----------|------|------|---|----------------|
| | Name | Type | Size | | |
| | VILL94 | A | 4 | 1994 Village Number See Village Appendix | |
| | LEKTI94 | A | 3 | 1994 Ban Lek Ti Code the Ban Lek Ti from 1994 survey Missing/Don't know | 1 – 297 999 |

Note: Since Forms 1, 2 and 3 are almost identical, the "Question No." and "Question" columns do not include the form number. For instance, the "Question No." column for the age question contains a 2, while the questionnaire forms are actually labeled 1.2 for Form 1, 2.2 for Form 2, and 3.2 for Form 3.

| | | | | Missing/Don't know | 9 |

^a Most, but not all, individuals who are coded 2 on the Q1 variable are listed on two household rosters within the village and, as a result, occur in the data twice. The individuals are coded as Q1=2 in the household where they used to live (the **origin household**), while the variables DHHID94 and DCEP94 identify them in the household where they are currently living in 1994 (the **destination household**). In the destination household, they would either be listed on Form 2 of an old household and coded as Q1=4 or on Form 3 of a new household and coded as Q1=1.

There is a small group of individuals (n=124) coded as Q1=2 who are not listed on two household rosters within the village. These individuals are either living at a temple in the village or have an unknown destination household. They are listed in their origin household only.

Note #1: For each old household interview, a Code 2 Tracking form was attached to Form 1. This tracking form was to be completed for each household member who was coded 2 on Q1. The tracking form had information on this member's origin household (where they are coded 2 on Q1) and information on this person's destination household (where they moved to). The following variables, created at CPC, are the destination household identifiers for each code 2 person.

Note #2: Some time after the data collection, it was determined that some members who were reported as migrants (Q1=3) by the household, ended up moving to another household in the village (Q1=2). These members have been assigned a code of "5" on the Q1 variable (Q1=3+2). The destination household identifier below are applicable for the code 5 members as well.
