

LHC_UYR data set

This life history data set is basically the LHC data set **without the overlapping person years**. All of the overlap based on the person year, not the age of the person, has been removed. The rules used to remove the overlap were taken from "Instructions for creating the circular migration file" by Dr. Ron Rindfuss, dated 12/22/03:

"Which data to use if more than one available?"

... In some cases there will be an overlap of 4 years (1990-1993). In other cases there will be an overlap that is longer.

In all cases where there is overlap for calendar year 1994, we will want to use the data from 2000. The reasoning is that the calendar year 1994 data from the 1994 fieldwork are based on only half or less of 1994 because of the timing of the fieldwork. Similarly, if we have data for calendar year 1995 from form 10 in 1994 and from either form 5 or form 11 in 2000, we will want to use the 2000 data.

When there is overlap on calendar years 1990-1993 (and perhaps 1994 for migrants interviewed in 1995), if one of the sources is a proxy report and the other is not, always use the one where the person for whom we have life history data is also the person who was the respondent. ...

For all others for calendar years 1990-1993 when there are two sources, use the 1994/5 data. The reasoning is that the data collection occurred closer in time to when the events were occurring."

Number of Person Years

313,332

Number of Variables

Sample Individual

Here is an individual's life history calendar from the LHC_UYR data set (same sample individual as in the LHC data set document). Please note that the duplicated person years have been removed from the life history calendar:

N	W	I	M	M	M	M	L	L	P	P	P	P	S	S	P	M
