

LHC data set

This life history data set is basically a concatenation of four life history data sets from the 1994 and 2000 household and migrant follow-up data. Before concatenation, all of the residence-related variables in each of the life history data sets were standardized to have the same coding scheme. The person year and age variables were renamed to be WYEAR (western calendar year) and AGE. All other original variables from the life history data sets are included, as well as a group of newly constructed flag variables. Most importantly, please note that **the overlapping person years have not been removed from this data set.**
