Codebook for the 1994 Migrant Follow-up Questionnaire

The Institute for Population and Social Research, Mahidol University  
Carolina Population Center, University of North Carolina at Chapel Hill

May 4, 2006

## Using this Codebook

This codebook is a product of one questionnaire. The questionnaire was administered to migrants, individuals who had been gone from the village for 2 months or more during the 1994 data collection, who were reported as migrating to one of four urban destinations. Below are some important things to know when working with this codebook:

### Data File Pointers

There is a data file “pointer” at the top of every page. All variables described on the page are located in the data file named.

Data File ==> MINDIV94

### Column x Column

Question No.	Variable			Question	Code
	Name	Type	Size		

- **Question No.** points to the question number on the questionnaire. Some variables, labeled “Created at CPC,” do not come from the questionnaire but have been created using the questionnaire data.
- **Variable** lists the...
  - Name** which is the SAS variable name in the data file.
  - Type** which tells whether it is a numeric variable (N) or an alphanumeric variable (A).
  - Size** which gives the maximum length of the variable.
- **Question** shows the actual question from the questionnaire if the variable is not created. If it is a created variable, then this column provides a short description of the variable. In this same column, below the question or description, is either the labels for each of the codes on this variable or a pointer to go see one of the codebook appendices.
- **Code** lists either the actual values on the variable or the format of those values.

### Variable Naming Convention?

There is not a strict naming convention per se, but there are some things to point out:

- We still adhere to 8 characters or less for all variable names.
- Most variables start with a ‘Q’ followed by the form and question numbers.
- Flag variables created at CPC usually end with ‘FL.’
- An identifier variable ends with the last 2 digits of the survey year from which it came.

### Missing Values

- **Not Applicable:** Variables are assigned this code when the question is skipped according to the logic in the questionnaire. This code is always determined by the maximum length of the variable, sometimes starting with 9’s and ending in an 8. For instance, a variable with a length of 3 is assigned a ‘998’ code. A variable with a length of 1 is assigned an ‘8’ code (with no leading 9’s).
- **Missing/Don’t know:** Variables are assigned this code when the respondent did not know the answer to the question or when the question was skipped during the interview. This code always has a value consisting of all 9’s. The number of 9’s is determined by the length of the variable. For instance, if the variable length is 3, then the variable is assigned a ‘999’ code.

## Standard Shading

As shown below, the column headers are always shaded as well as the row that contains the actual question or description that corresponds with the variable.

Question No.	Variable			Question	Code
	Name	Type	Size		
8.2				Age	
	Q8_2	N	2	Code actual age in years	0
				Less than 1 month	
				At least 1 month, but less than 1 year (e.g., 5 months old would be coded as 85)	8 + # of months
				80 years old and over	80

## Restricted-Use Shading

There are variables described in the codebook which are only available in the restricted-use data files. For these variables, all of the columns – question number, variable name, question and code – and all of the codes and labels have been completely shaded:

	FODIS	A	4	District	
				See District Appendix	
				Missing/Don't know	9999

Some of the restricted-use variables are recoded for the public release data files, while others are not available in any form. The variable above (FODIS) is not available in any form in the public release data files. When a restricted-use variable is recoded for the public release data files, then a note and the public release codes will follow the variable:

11.5				Current address	
	Q11_5R1	A	6	Another country	3 + Country #
				Bangkok	44001
				Korat	64021
				Rayong	74049
				Chonburi	84009
				Another province	9 + Province #
				Another district in Buriram	10 + District #
				Village in Nang Rong district	11 + Village #
				N/A	999998
				Missing/Don't know	999999

**The Q11\_5R1 variable in the public use data has the following values which are recodes of the original values:**

Public Use Codes	Q11_5R1	A	2	Another country	3
				Bangkok	4
				Korat	6
				Rayong	7
				Chonburi	8
				Another province	9
				Another district in Buriram	10
				Village in Nang Rong district	11
				N/A	98
				Missing/Don't know	99

## Identifier Variables for the Community and Household Data in 1984, 1994 and 2000

Understanding the identifier variables is vital in working with the data files and merging them appropriately. Analysts will need to consistently use three different types of identifiers – village, household and individual - in working with the community and household data files. Each identifier type represents a different level of observation and detail and provides the key to the most important mechanism for matching and linking villages, households and people. Below, there is a description for each identifier type, which is then followed by the identifier variable names (both restricted- and public-use data) for each survey year:

- **Village** - A unique number was assigned, during or just prior to the data collection, to villages that existed within the boundaries of the 1984 Nang Rong District.

	<u>1984 Survey</u>	<u>1994 Survey</u>	<u>2000 Survey</u>
Restricted	VILL84	VILL94	VILL00
Public	n/a	n/a	n/a

- **Household** - Each household received two unique identifiers. The first identifier was assigned by an interviewer within the household's respective village as the village list was being compiled. The second identifier was written on the household's questionnaire by the interviewer. This identifier includes the village number and the house number (or unique sequential number in 1994).

	<u>1984 Survey</u>	<u>1994 Survey</u>	<u>2000 Survey</u>
Restricted #1	HOUSE84	LEKT194	HOUSE00
Restricted #2	HHID84	HHID94	HHID00
Public	PHHID84	PHHID94	PHHID00

- **Individual** - The individual identifiers (CEP codes) are found on the household roster. The CEP code was assigned by the interviewer as the household roster was being updated during the interview.

	<u>1984 Survey</u>	<u>1994 Survey</u>	<u>2000 Survey</u>
Restricted	CEP84	CEP94	CEP00
Public	CEP84	CEP94	CEP00

Given the three identifier types, the following table shows what identifier variables are needed to uniquely identify a village, a household and an individual in both the restricted- and public-use data:

### Community and Household Survey Data

To uniquely identify a ...	#	Restricted-Use Data			Public-Use Data		
		1984 Survey	1994 Survey	2000 Survey	1984 Survey	1994 Survey	2000 Survey

## Identifier Variables for the Migrant Follow-Up Data in 1994 and 2000

The Migrant Follow-Up data has only two identifier types – household and individual. Please note, however, that the household survey identifiers are part of the Migrant Follow-Up data to allow linkages between the migrant and household data. The two migrant identifier types represent a different level of observation and detail that provides the key to the most important mechanism for matching and linking migrant households and people. Below, there is a description for each identifier type, which is then followed by the identifier variable names (both restricted- and public-use data) for each survey year – 1994 and 2000:

- Household** – Each migrant household had an identifier written on the questionnaire by the interviewer. This identifier includes the village number from which the migrant originated and a unique sequential number. In the 2000 data, there were two phases of the Migrant Follow-Up data collection – the urban phase and the rural phase. Since the household identifier (MID00) could be the same across the two phases, a second variable (MIGTYPE), signifying the migrant type, is needed to uniquely identify the household.

	<u>1994 Survey</u>	<u>2000 Survey</u>
Restricted	MID	MID00, MIGTYPE
Public	PMID94	PMID00

- Individual** - The individual identifiers (MCEP codes) are found on the migrant's household roster. The MCEP code was assigned by the interviewer as the migrant's household roster was being updated during the interview.

	<u>1994 Survey</u>	<u>2000 Survey</u>
Restricted	MCEP8	MCEP00
Public	MCEP8	MCEP00

Given these two migrant identifier types, the following table shows what identifier variables are needed to uniquely identify a migrant household and an individual in both the restricted- and public-use data:

### Migrant Follow-Up Data

To uniquely Identify a ...	Restricted-Use Data		Public-Use Data	
	1994 Survey	2000 Survey	1994 Survey	2000 Survey
<b>Migrant Household</b>	MID	MID00 MIGTYPE	PMID94	PMID00
<b>Individual</b>	MID MCEP8	MID00 MIGTYPE MCEP00	PMID94 MCEP8	PMID00 MCEP00

## Interview Attempts

Question No.	Variable			Question	Code
	Name	Type	Size		
Created at CPC				Total number of Interview Attempts.	
	ATTEMPTS	N	1	Code actual number of attempts	1 – 6

### Interview Attempts 1 – 6

Since variables across the six interview attempts use the same codes, six variables which correspond to the six interview attempts are listed for each Interview Attempt question. Variables corresponding to the first interview end with 1, second interview with 2, third interview with 3 and so on to 6.

9.7				Next, I would like to ask you in some detail about remittance between you (or your household at the place of destination) and members of your old household who stayed with you in 1984 (roster in Form A).	

**Interviewers:**

- For the migrant whose household was interviewed in 1994, use the first page of Form 1 to determine which 1984 household members split from the household by 1994. Afterward, record the CEP codes and names of the members who lived in the same house in the same column.
- For the migrants whose old household was not interviewed in 1994 (the whole family moved), do not ask this question.

**Note:** To understand the data structure of Q9.7.1 and Q9.7.2, it is important to know the goals of the data collection. We began with the 1984 household in which the migrant resided in 1984. This is 1984 household may have split into several households by 1994. The interviewer had to determine the 1994 households in which the 1984 household members lived, so that we could ask about receiving and sending money or goods to each of these 1994 households. There is one record for each of these 1994 households containing at least one member from the 1984 household. The CEP codes are in variables Q9\_7\_C1 – C9.
