Codebook for the 2000 Migrant Follow-Up Questionnaire

The Institute for Population and Social Research, Mahidol University
Carolina Population Center, University of North Carolina at Chapel Hill

June 25, 2004

Using this Codebook

This codebook is a product of two questionnaires. One questionnaire was administered to migrants who initially migrated to urban destinations (R2U Migrants), while the other questionnaire was administered to migrants who initially migrated to rural destinations (R2R Migrants). Parts of the two questionnaires were exactly the same; however, there were additional forms and some questions asked of R2U Migrants only and other questions asked of R2R Migrants only. These formas and questions are noted in the codebook. Below are some important things to know when working with this codebook:

Data File Pointers

There is a data file "pointer" at the top of every page. All variables described on the page are located in the data file named.

_____

Last Modified: 05/21/03   Data File ==> MINDIV00

Column x Column

Question No.	Variable			Question	Code
	Name	**Type**	**Size**		

- ***Question No***. points to the question number on the questionnaire. Some variables, labeled "Created at CPC," do not come from the questionnaire but have been created using the questionnaire data.

- ***Variable*** lists the...

> ***Name*** which is the SAS variable name in the data file.
> ***Type*** which tells whether it is a numeric variable (N) or an alphanumeric variable (A).
> ***Size*** which gives the maximum length of the variable.

- ***Question*** shows the actual question from the questionnaire if the variable is not created. If it is a created variable, then this column provides a short description of the variable. In this same column, below the question or description, is either the labels for each of the codes on this variable or a pointer to go see one of the codebook appendices.

- ***Code*** lists either the actual values on the variable or the format of those values.

Variable Naming Convention?

There is not a strict naming convention per se, but there are some things to point out:

- We still adhere to 8 characters or less for all variable names.
- Most variables start with an 'X' followed by the form and question numbers.
- Flag variables created at CPC usually end with 'FL.'
- An identifier variable ends with the last 2 digits of the survey year from which it came.

Missing Values

- ***Not Applicable***: Variables are assigned this code when the question is skipped according to the logic in the questionnaire.   This code is always SAS system missing, which is a value of "." for numeric variables or a value of " " (or blank) for alphanumeric variables.

- ***Missing/Don't know***:   Variables are assigned this code when the respondent did not know the answer to the question or when the question was skipped during the interview. This code always has a value consisting of all 9's.   The number of 9's is determined by the length of the variable. For instance, if the variable length is 3, then the variable is assigned a '999' code.

Standard Shading

As shown below, the column headers are always shaded as well as the row that contains the actual question or description that corresponds with the variable.

Question No.	Variable			Question	Code
	Name	Type	Size		
8.3				Age	
	X8_3	N	2	Code actual age/years Age under 1 year old N/A Missing/Don't know	 0 [.] 99

Restricted-Use Shading

There are variables described in the codebook which are only available in the restricted-use data files. For these variables, all of the columns – question number, variable name, question and code – and all of the codes and labels have been completey shaded:

Created at CPC				2000 Origin Village Number of the Migrant	
	MOVILL00	A	6	• First 2 digits = 2000 District # • Next 2 digits = 2000 Sub-District # • Last 2 digits = 2000 Moo Ti	

Some of the restricted-use variables are recoded for the public release data files, while others are not available in any form. The variable above (MOVILL00) is not available in any form in the public release data files. When a restricted-use variable is recoded for the public release data files, then a note and the public release codes will follow the variable:

10.5				Current address	
	X10_5R1	A	10	Bangkok Korat Rayong Konchinaburi Another province Another district in Buriram In the origin village Another village in Nang Rong Another country N/A Missing/Don't know	2 3 4 5 6 + Province # 7 + District # 8 + Village # + House # 8 + Village # 9 + Country # [ ] 9999999999

The X10_5R1 variable in the public use data has the following values which are recodes of the original values:

	X10_5R1	A	2	Bangkok	2
				Korat	3
				Rayong	4
				Chonburi	5
				Another province	6
Public Use Codes				Another district in Buriram	7
				In the origin village	8
				Another village in Nang Rong	88

				Missing/Don't know	99

Identifier Variables for the Community and Household Data in 1984, 1994 and 2000

Understanding the identifier variables is vital in working with the data files and merging them appropriately. Analysts will need to consistently use three different types of identifiers – village, household and individual - in working with the community and household data files. Each identifier type represents a different level of observation and detail and provides the key to the most important mechanism for matching and linking villages, households and people. Below, there is a description for each identifier type, which is then followed by the identifier variable names (both restricted- and public-use data) for each survey year:

- **Village** - A unique number was assigned, during or just prior to the data collection, to villages that existed within the boundaries of the 1984 Nang Rong District.

	1984 Survey	1994 Survey	2000 Survey
Restricted	VILL84	VILL94	VILL00
Public	n/a	n/a	n/a

- **Household** - Each household received <u>two</u> unique identifiers. The first identifier was assigned by an interviewer within the household's respective village as the village list was being compiled. The second identifier was written on the household's questionnaire by the interviewer. This identifier includes the village number and the house number (or unique sequential number in 1994).

	1984 Survey	1994 Survey	2000 Survey
Restricted #1	HOUSE84	LEKTI94	HOUSE00
Restricted #2	HHID84	HHID94	HHID00
Public	PHHID84	PHHID94	PHHID00

- **Individual** - The individual identifiers (CEP codes) are found on the household roster. The CEP code was assigned by the interviewer as the household roster was being updated during the interview.

	1984 Survey	1994 Survey	2000 Survey
Restricted	CEP84	CEP94	CEP00
Public	CEP84	CEP94	CEP00

Given the three identifier types, the following table shows what identifier variables are needed to uniquely identify a village, a household and an individual in both the restricted- and public-use data:

Community and Household Survey Data

To uniquely identify a …	#	Restricted-Use Data			Public-Use Data		
		1984 Survey	1994 Survey	2000 Survey	1984 Survey	1994 Survey	2000 Survey

Identifier Variables for the Migrant Follow-Up Data in 1994 and 2000

The Migrant Follow-Up data has only two identifier types – household and individual.   Please note, however, that the household survey identifiers are part of the Migrant Follow-Up data to allow linkages between the migrant and household data.   The two migrant identifier types represent a different level of observation and detail that provides the key to the most important mechanism for matching and linking migrant households and people. Below, there is a description for each identifier type, which is then followed by the identifier variable names (both restricted- and public-use data) for each survey year – 1994 and 2000:

- **Household** – Each migrant household had an identifier written on the questionnaire by the interviewer. This identifier includes the village number from which the migrant originated and a unique sequential number.   In the 2000 data, there were two phases of the Migrant Follow-Up data collection – the urban phase and the rural phase.   Since the household identifier (MID00) could be the same across the two phases, a second variable (MIGTYPE), signifying the migrant type, is needed to uniquely identify the household.

	1994 Survey	2000 Survey
Restricted	MID	MID00, MIGTYPE
Public	PMID94	PMID00

- **Individual** - The individual identifiers (MCEP codes) are found on the migrant's household roster. The MCEP code was assigned by the interviewer as the migrant's household roster was being updated during the interview.

	1994 Survey	2000 Survey
Restricted	MCEP8	MCEP00
Public	MCEP8	MCEP00

Given these two migrant identifier types, the following table shows what identifier variables are needed to uniquely identify a migrant household and an individual in both the restricted- and public-use data:

Migrant Follow-Up Data

To uniquely Identify a …	Restricted-Use Data		Public-Use Data	
	1994 Survey	2000 Survey	1994 Survey	2000 Survey
Migrant Household	MID	MID00 MIGTYPE	PMID94	PMID00

Since variables across the three interview attempts use the same codes, three variables which correspond to the three interview attempts are listed for each Form AF question. (Please note, the one exception is question AF2 which was only asked during the first interview attempt.)   Variables corresponding to the first interview end with _1, second interview with _2 and third interview with _3.

Instructions to Interviewer for Question 7.6

Residence

If the primary study migrant has **only one residence** in 7.5, please do the following:

a. On the next page, circle the appropriate response.
b. Ask the associated follow up question(s).

If the primary study migrant has **more than one residence** in 7.5, please do the following:

a. Ask the respondent to choose the residence in which he/she spent the most time in the past 7 days. If the interview is taking place at the primary study migrant's 1984/1994 origin village, then ask the respondent to think about the most recent 7-day period that he/she spent in the place of destination. For that period, ask the respondent to choose the residence in which he/she spent the most time.
b. On the next page, circle the appropriate response given in "a."
c. Ask the associated follow up question(s).

How many people...

For both types of "How many people..." questions described below, the primary study migrant should **NOT** be included in the count.

•   For each residence situation, we are interested in how many people live with the primary study migrant. This number will then be used for the next set of questions in 7.7. Due to the importance of this number, it has been given a label of **C.K.T.**, which stands for "chamnuan khon ti yoo duai kab khun."

•   In addition, for the construction, dormitory and work place residences, there is a question that asks how many people live in the entire area. This number should include the people living with the primary study migrant plus all other people living at the site or building.
