

**Carolina Population Center
Summer 2021 Undergraduate Research Program**

Project Name

Galapagos Healthy Family Study

Faculty Mentor

Dr. Amanda Thompson, Departments of Anthropology and Nutrition

Project Description

The Galapagos Healthy Family Study examines the impact of water and diet quality on the development of the dual burden of undernutrition/infectious illness and overweight/cardiometabolic disease among children and adults living in Galapagos, Ecuador.

Scope of Work for Internship

Topics related to diet quality, access, and health are the focus of this internship. The intern would work along with the faculty advisor and research team on developing measures of household and individual diet quality. Other research areas are also possible.

Expected Deliverables

Data analysis and preparation of results tables suitable for publication in a refereed journal. Intern would have the chance to be first author on a published paper.

Preferred Skills

Stata

Time Commitment

Full time or part time
