i) Research Statement

My research program focuses on the accurate description and more complete understanding of population health patterns and trends in the United States. I have had a very active federally funded grant portfolio for over two decades and actively publish my work, oftentimes with students and postdoctoral scholars, in leading scientific outlets. My work has been cited over 12,500 times to date. Beginning in 2020, I became the Co-Director (with Kathleen Mullan Harris) of the long-running National Longitudinal Study of Adolescent to Adult Health (Add Health), a nationally-representative longitudinal study of over 20,000 American adults who are now around 40 years old and have been followed since they were adolescents. I am particularly interested in understanding how and why the physical, mental, and cognitive health of U.S. adults differ across racial/ethnic, gender, and socioeconomic subgroups of the population.

j) Teaching Statement

My teaching program mirrors my research: I am interested in communicating concepts, theories, methods, findings, and policy implications related to health and health disparities in the United States. I teach and mentor students of all levels at UNC, from first-semester undergraduate students to Ph.D.-level graduate students to postdoctoral trainees. I design my courses to be challenging, but also clear, well-organized, and well-managed. I aim to be an instructor and mentor who is extremely approachable and willing to help students reach their educational and career goals. My teaching program goes well beyond classroom instruction and mentoring; I am also interested in creating academic programs to enhance education at UNC. To date, I have led the creation of the popular Health & Society minor in the Department of Sociology and have co-led (with Allison Aiello in the Department of Epidemiology) the creation of the Biosocial Science Training Program at the Carolina Population Center.

k) Service and Engagement Statement

I am deeply involved in service to the UNC community and, even more so, to the scientific community at the national level. I view service as an important part of the job as a faculty member. Since I moved to UNC in 2015, I have been centrally involved in programs and initiatives in the Department of Sociology and Carolina Population Center, where I am working on making both units stronger than ever before. At the national level, my most important recent service roles have been at the Population Association of America, National Institutes of Health, the US Census Bureau, and the National Academies of Science, Engineering, and Medicine. At the present time, I am serving as President-Elect (2020), President (2021), and Past-President (2022) of the Population Association of America, which is a large and prestigious professional association dedicated to enhancing population research around the country and world.
