

Carolina Population Center
Summer 2022 Undergraduate Research Program

Project Name

[Cebu Longitudinal Health and Nutrition Survey](#)

Faculty Mentor

Dr. Linda Adair, Nutrition

Project Description

The CLHNS is a birth cohort study that has followed a group of Filipino "index children" and their mothers since 1983. We have a wide range of data on diet, physical activity, health conditions (including self-report, measurements and blood samples) as well as social and economic factors at the household and community level. With parallel data on mothers and children, intergenerational comparisons are possible.

Scope of Work for Internship

The intern could choose any of a number of research questions for which CLHNS data are ideally suited. Examples include:

- Health and economic productivity
- Patterns of family planning across generations
- Diet and physical activity and their roles in obesity
- Risk factors and consequences of mental health (depressive symptoms)

Expected Deliverables

Construction of an analysis data set and draft of a paper for publication.

Preferred Skills

Statistical programming (Stata experience or willingness to learn)

Time Commitment & Mode

Full time or part time; in-person
