

Summer 2024 Undergraduate Research Internship

Project Name

Social Psychoneuroimmunology and Health Disparities

Faculty Mentor

Dr. Keely Muscatell (Psychology and Neuroscience)

Project Description

A variety of projects in the Social Neuroscience and Health Lab in the Dept of Psychology and Neuroscience focus on understanding the impacts of social experiences (e.g., stress, racism, social connection) on the immune system, in an effort to understand the development of health disparities among individuals from lower socioeconomic status and racial minority groups.

Scope of Work for Internship

Interns will work on all aspects of the research projects, including helping with data collection from participants in fMRI studies, data management, coding, and cleaning, immunoassays, and literature reviews.

Expected Deliverables

No specific deliverables.

Preferred Skills

No specific skills required.
