

Summer 2025 Undergraduate Research Internship

Project Name

Social Stressors, Social Identity, and Aging Pathways to Alzheimer's Disease and related dementias (ADRD)

Faculty Mentor

Dr. Ganga Bey (Epidemiology)

Project Description

This project entails the analysis of secondary data as well as the collection of primary data to examine how experiences of the social environment impact aging and risk for ADRD, and how socialized identity-related characteristics influence these relationships. The Bey lab conducts highly interdisciplinary work integrating social theory, geroscience, epigenetics, and population health sciences approaches to cardiovascular and cognitive health outcome differences. We have an exceptional, welcoming team of PhD students and support staff.

Scope of Work for Internship

Interns will have the opportunity to work on several aspects of the project, from data collection and analysis to abstract and manuscript drafting.

Expected Deliverables

None

Preferred Skills

Statistical program experience, data collection experience, CITI training, familiarity with social theories for population health
